

```
sudo apt update -y && sudo apt upgrade -y
```

```
sudo apt update -y
```

```
sudo apt-get install apache2
```

```
sudo systemctl restart apache2
```

```
sudo apt-get install php libapache2-mod-php php-mcrypt php-mysql php-zip
```

```
sudo nano /var/www/html/info.php
```

```
<?php
```

```
phpinfo();
```

```
?>
```

```
sudo nano /var/www/html/info.php
```

```
sudo apt-get install php-dev
```

```
sudo systemctl restart apache2
```

```
sudo apt install mariadb-server mariadb-client php-mysql
```

```
sudo mysql_secure_installation
```

```
mysql -u root -p
```

Iniciamos sesión de MySQL en el shell con permisos de root

mysql -u root -p

Crearemos la base de datos que va a utilizar el sistema SuiteCRM:

```
Mariadb [(none)]> CREATE DATABASE suitecrm_db;
```

Comprobar que se ha creado correctamente la base de datos.:

SHOW DATABASES; (Mostrar pantallazo.)

Crearemos un usuario de acceso a la base de datos (nombrado 'suitecrm'):

```
MariaDB [(none)]> CREATE USER 'suitecrm' IDENTIFIED BY 'password';
```

Otorgaremos al usuario privilegios de administrador de la base de datos:

```
MariaDB [(none)]> GRANT ALL PRIVILEGES ON suitecrm_db.* TO suitecrm;
```

```
wget https://suitecrm.com/download/141/suite714/564198/suitecrm-7-14-5.zip
```

```
unzip suitecrm-7-14-5.zip
```

```
mv SuiteCRM-7.14.5/ /var/www/html/suitecrm
```

```
sudo chown -R www-data:www-data /var/www/html/suitecrm
```

```
sudo chmod -R 777 /var/www/html/suitecrm
```

SUITECRM

Step 2 of 2 - Configuration

Database Configuration

Specify Database Type

MySQL (mysql extension)

Provide Database Name

Database Name / *

suitecrm_db

Host Name / *

localhost

User / *

suitecrm

Password

SuiteCRM Database User /

Same as Admin User

More options

» Choose Demo Data

Populate Database with Demo Data

Yes

Site Configuration

* Required field

Identify Administration User /

SuiteCRM Application Admin Name *

admin

SuiteCRM Admin User Password *

Re-enter SuiteCRM Admin User Password *

URL of SuiteCRM Instance *

http://localhost/suitecrm

Email Address: *

mail@mail.com

Creating SuiteCRM configuration file (config.php)

Creating SuiteCRM application tables, audit tables and relationship metadata

Creating the database suitecrm_db on localhost...done

.....

Creating default SuiteCRM data

Creating default users... done

Creating default scheduler jobs... done

Populating the database tables with demo data (this may take a little while)

The setup of SuiteCRM 7.14.5 is now complete!

Total time: 30.876765012741 seconds.

Approximate memory used: 21282000 bytes.
